

SECTION A-A

Strip seal gland

## PART ELEVATION OF BARRIER CURE

A diagram showing a branching structure. A vertical line on the left splits into two diagonal lines that branch out to the right. The upper branch is labeled 'Rouse' with an arrow pointing to it. There are clusters of small dots at the ends of the branches and along the vertical line.

Structural steel for the expansion joint system and curb plate shall be coated with a minimum of two coats of inorganic zinc primer (5 mils minimum) or galvanized in accordance with ASTM A123. Anchors need not be protected from over spray.

Plan dimensions are based on installation at 60°F. The expansion gap and other dimensions shall be increased or decreased for each 10° rise or fall in temperature at installation.

Longitudinal reinforcing steel shall be placed so that ends shall not be more than 4" from vertical leg of the steel armor at the expansion joint system.
